Question 1 / 10 Flag for review • 1 mark

What is the effect of increasing the regularization parameter alpha in Ridge Regression?

Use arrows ← and → to navigate

Options

A. a. It increases the complexity of the model

B. b. It reduces the complexity of the model

C. c. It has no effect on the the model

D. d. It increases the model's sensitivity to the training data

Question 2 / 10 Flag for review • 1 mark

Which of the following statements about the Na¨ıve Bayes algorithm is incorrect?

Options

A. a. Naive Bayes assumes that features are conditionally independent given the class label

B. b. Gaussian Naive Bayes is suitable for datasets with continuous features

C. c. Multinomial Naive Bayes is commonly used for text classification tasks

D. d. Naive Bayes always outperforms logistic regression on all datasets

Question 3 / 10 Flag for review • 1 mark

What is the purpose of the hidden_layer_sizes parameter in MLPClassifier?

Options

A. a. It specifies the number of layers in the MLP

B. b. It defines the activation function used in the output layer

C. c. It specifies the number of neurons in each hidden layer

D. d. It controls the learning rate during training

Question 4 / 10 Flag for review • 1 mark

In Scikit-Learn's VotingClassifier, what is the effect of setting weights=[1, 2, 3] for three classifiers?

Options

A. a. It decides how many features are to be considered by each of the estimators

B. b. It signifies the influence of each estimator towards the prediction

C. c. It offers the order in which each estimator is considered before making a prediction

D. d. It provides weights to different classes in a multiclass classification problem

Question 5 / 10 Flag for review • 1 mark

Which of the following algorithms may be impacted by Feature Scaling? (MSQ)

Use arrows ← and → to navigate

Options Select all that apply

- A. a. Linear Regression
- B. b. Decision Tree
- C. c. SVM
- D. d. NaiveBayes

Question 6 / 10 Flag for review • 1 mark

Which of the following statements are true? (MSQ)

Options Select all that apply

- A. a. KNeighborsClassifier with low values of n_neighbors produces complex decision boundaries
- B. b. KNeighborsClassifier with low values of n_neighbors produces smooth decision boundaries
- C. c. In KNeighborsClassifier the scale of the features(columns) can impact the decision boundaries
- D. d. None of the above

Question 7 / 10 Flag for review • 1 mark

Which of the following techniques are used in decision trees to make decisions or to measure the quality of a split while training the model? (MSQ)

Options Select all that apply

- [ ] A. a. Random Sampling
- [ ] B. b. RoC Curve
- [ ] C. c. Information Gain
- [ ] D. d. Gini Impurity

Question 8 / 10 Flag for review • 1 mark

Which of the following statements are true regarding the RandomForestClassifier? (MSQ)

Options Select all that apply

- [ ] A. a. The randomness in the model can be from having bootstrap="true" or having max features < n features
- [ ] B. b. oob_score can be used to get a generalization score when bootstrap="true"
- [ ] C. c. The class_weight value can be used to associate weights with classes
- [ ] D. d. When bootstrap="False", the parameter max_samples can be used to decide the number of samples to be drawn to train each base estimator

Question 9 / 10 Flag for review • 1 mark

Which of the following techniques can be used for hyperparameter tuning in Ridge Regression? Select all correct options. (MSQ)

Options Select all that apply

- A. a. GridSearchCV
- B. b. ElasticNetCV
- C. c. RandomizedSearchCV
- D. d. Mini batch gradient descent

Question 10 / 10 Flag for review • 1 mark

Which of the following statements are true with regard to logistic regression? (MSQ)

Options Select all that apply

- A. a. It is a powerful method to solve regression tasks such as income prediction, house price prediction, and sales prediction
- B. b. The predict_proba(X) method can be used to obtain the predicted probability of each class by the model for the data X
- C. c. The penalty parameter is used to decide the type of regularization used
- D. d. Setting the max_iter parameter to 100 ensures that the model takes exactly 100 iterations to finish training
